Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Research (TIGR),
Constructed at the Institute for Genomic Data to a cloned population of
Trypanosoma brucei (TREU927/4 Gurat 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smitch, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing small
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Trypanosoma.

XX

Novel protease from Bacillus subtilis LC20 - useful in laundry and dishwashing detergents and for leather processing.

PT dishwashing detergents and for leather processing.

RS

Claim 11; Page 52-53; 77pp; English.

CC

CC

Contained in Bacillus subtilis LC20 NRKL B-21680. The protease gene was contained in Bacillus subtilis LC20 NRKL B-21680. The protease gene was contained in Bacillus subtilis LC20 NRKL B-21680. The protease gene was contained in Bacillus subtilis LC20 NRKL B-21680. The protease gene was contained in Bacillus subtilis LC20 NRKL B-21680. The protease gene was contained in Bacillus subtilis LC20 NRKL B-21680. The protease gene was contained in method for producing the protease. The gene by inverse PCR (see AAV82410-11), reconstruction of 65' and 3' ends and contained and dishwashing detergents, for institutional and industrial cannot dishwashing detergents, for institutional and industrial cannoting the degree of hydrolysis of proteins, degradation of undesired containing the degree of hydrolysis of proteins, degradation of undesired containing the provades mutant containing the provades mutant containing the protease activity is diminished. Such cells mutant containing the protease activity is diminished. Such cells can be used in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins

                                                                                                                                                                                                                                              The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by cleid acid and they have a high stability to oxidising agents. The cleid acid and they have a high stability to oxidising agents. The cleid acid and they have a high stability to convert the prange 4-13 and has at least 80% of its optimum activity over the prange 6-11; (b) after 30 minutes at 40 deg. C it is atable over the ph range 6-11; (i) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has moderular weight about 43;000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to axidising agents allows the enzyme to be an effective component of washing compositions including bleaches. The present sequence represente an alkaline protease encoding bun.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SerGlyGlyLeuGlyGlyLeuFroSerAsnLeuAsnThrLeuPheSerGlnAlaTrpAsn 119
                                                                                                                                                                                                                                                                                                                                               The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oles acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing olothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease encoding DNA. (Updated on 20-MAR-2003 to correct DR field.)

enzyme

```
The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11; c) its isoelectric point is 8:9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the benzyme to be an effective component of washing compositions including bleaches. The present squence represents an alkaline protease encoding DNA. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents the coding sequence for the protease from Thermococcus celer DSM-2476. This sequence encodes a protease of the invention. The proteases of the invention have extremely high thermal stability. The proteases can be used as research reagents, and industrially in the food, drug and chemical industries. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ||||||||:::

The invention relates to a hyperthermostable protease derived from a thermophilic bacterium (especially Pyrococcus furiosus). The protease has working temperature 40-110 deg.C (optimum 80-95 deg.C), working ph 5-10 (optimum 6-8), and retains more than 90% of its activity after 8 hours at 95 deg.C. The invention also provides gene sequences encoding a polypeptide of formula 81G-Aha-61y-61y-Asn-PRO, where 81G is a signal peptide from subtilisin, and PRO is the work protease. Host cells (especially Bacillus strains) transformed with vectors comprising the genes are used for the recombinant production of the protease. The hyperthermostable protease which can be prepared in quantity suitable for industrial use, can be used as an additive for drugs, washing agents and for chemical synthesis
